Demersal Fishing
Opportunities for 2021

Mike Park: CEO Scottish White Fish Producers Association

ICES Advice on fishing opportunities, catch, and effort Greater North Sea ecoregion Published 30 June 2020

## Cod (Gadus morhua) in Subarea 4, Division 7.d, and Subdivision 20 (North Sea, eastern English Channel, Skagerrak)

## ICES advice on fishing opportunities

ICES advises that when the MSY approach is applied, catches in 2021 should be no more than 14 755 tonnes.

ICES notes the existence of a precautionary management plan, developed and adopted by one of the relevant management authorities for this stock.

Note: This advice sheet is abbreviated due to the COVID-19 disruption. The previous advice issued for 2020 is attached as Annex 1.

## Stock development over time

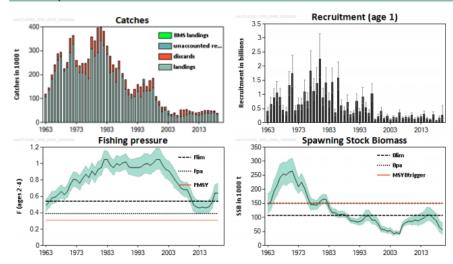

Figure 1 Cod in Subarea 4, Division 7.d, and Subdivision 20. Summary of the stock assessment. Catches are assessment estimates. Only positive unaccounted removals are plotted (see Table 5). Shaded areas (F, SSB) and error bars (R) indicate 95% confidence intervals. Landings below minimum conservation reference size (BMS) as officially reported.

Table 3 Cod in Subarea 4, Division 7.d, and Subdivision 20. Annual catch scenarios. All weights are in tonnes (t).
